

Practical List for Visual Programming

- 1) Display a message in a lable on click event of the button.

- 2) Create a simple VB.Net Project. Place a button on the form and show welcome message on the click of the button using msgbox() function.
- 3) Accept two numbers using Inputbox on the click of the button and display SUM of these two numbers using MsgBox.
- 4) Design a form as shown below and perform the operations on the numbers entered. Result Textbox must be readonly.

- 5) Write a program to find weather the given no is Positive, negative or zero.
- 6) Write a program to find the maximum and minimum of given three numbers.
- 7) Develop VB.NET application which calculates the simple interest = $p*r*n / 100$ and compound interest = $p*(1+r/100)^n$ using textbox. In the same application take another form which calculates area and circumference of circle by declaring Pi as constant in module.
- 8) Design a form as shown below and display the array in ascending and descending order.

9) Design a VB form as shown below to read the student data and generate the mark-sheet data. Clear the data when user clicks the “Clear” button. When user click on “Exit” then end the execution.

10) Develop an application that demonstrates CUT, COPY AND PASTE command

11) Design the following calculator .

12) Create form that has text boxes for Email Id & password.

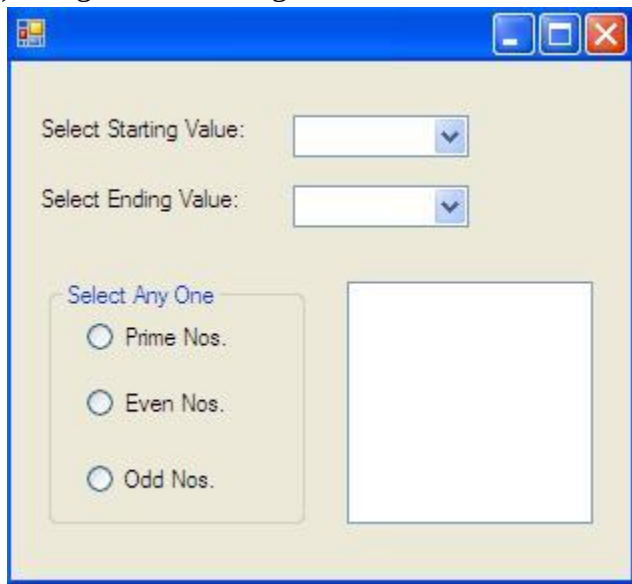

- Accept only valid Email Id. An email is valid when
- It contains only one @ and at least one . (dot) after @.
- It [a-z, 0-9, .(dot) and _ (underscore)] characters only.

- d. Example: john.mathew@abccorp.com (valid) john.mathew@abccorp (invalid)
- e. Valid password must have three characters & first character should not be numeric.
- f. Example: AB (invalid), 1ty (invalid), abc (valid)
- g. Compare string values with case sensitive comparison.
- h. Display appropriate message for invalid entries.

13) Design the digital watch using Timer Control.

14) Sort the 1-D array elements in ascending / descending order by **creating user defined Sort function** and prints the original & outputted array.

15) Design the following form.

From the given combo boxes user has to select Starting value and ending value. When user clicks on “Prime nos” radio button then the prime nos. between the given ranges is displayed in the list box. Same as for other options.

16) Design the following form:

When user clicks on “Upper Case” radio button then inputted string will be displayed in Upper case in Output string label. Same as for other options. Ask additional information for Mid and Instr using inputbox

- 17) Develop the following form. When user clicks add button add the name in list box (Friend), using list box (Friend) enter selected name in another list box (Invite), also remove-selected name from list box

18) Develop following form. When user clicks on Submit button then all information will be printed in following textbox. When user clicks on Clear then all textboxes will clear. When user clicks on Exit button then application will be closed.

The screenshot shows a Windows application window titled "General Form". It contains the following controls:

- Two text boxes for "First Name" and "Last Name".
- A larger text box for "Address".
- Two groups of radio buttons: "Marital Status" with options "Married" (selected) and "Unmarried"; and "Gender" with options "Male" and "Female" (selected).
- Three checkboxes under "English Ability": "Read" (checked), "Write" (checked), and "Speak" (unchecked).
- A date picker for "Date of Birth" showing "03- Jul -12".
- Three buttons at the bottom: "Submit", "Clear", and "Exit".
- A large empty text box at the very bottom for output.

19) Design following Form which shows use of PictureBox.

The screenshot shows a Windows application window titled "PictureBox". It contains:

- A large rectangular area displaying a high-resolution image of a red-orange flower.
- Two buttons at the bottom: "Load Image" and "Streach Image" (note the misspelling of "Stretch").

20) Design following Form which shows use of Horizontal and Vertical Scroll Bar.

The screenshot shows a Windows application window titled "Example of HScrollBar, VScrollBar". It features:

- A horizontal scrollbar at the top and a vertical scrollbar on the right side.
- The text "(42 , 66)" displayed in the center of the form, representing the coordinates of the scrollbar's thumb.

21) Design following Form which shows use of Checked Listbox.

Form17

Enter Item :

Add item

Find Checked

Uncheck item

22) Create a following form and insert a linked label on the form.

Form1

New form

Whenever user click on new form then new form window should be displayed.

23) Design following Form which shows use of Treeview control:

Treeview

Enter New Value :

Add to Treeview

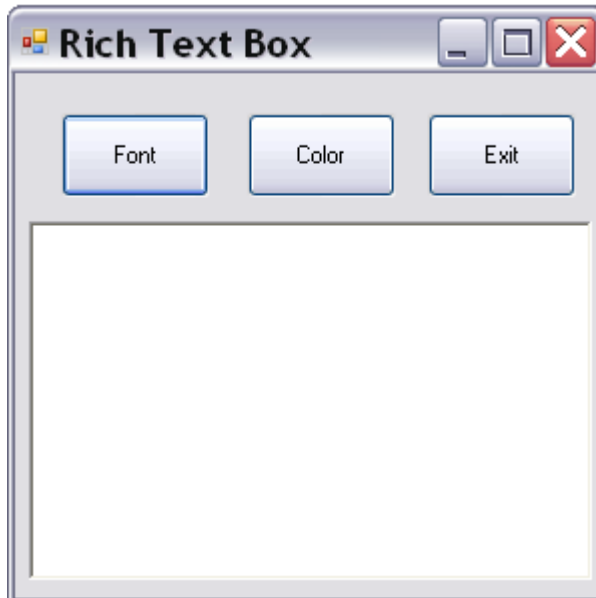

Remove From Treeview

Full Path :

Earth\India\Gujarat

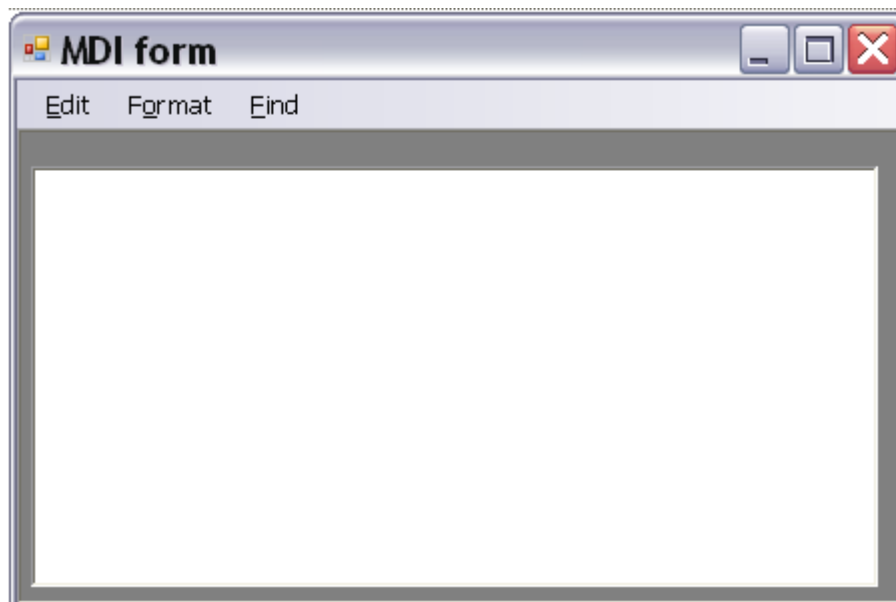

- Earth
 - India
 - Gujarat
 - Maharashtra
 - Goa
 - UK
 - USA
 - State 1
 - State 2
 - State 3
 - Australia

24) Design following Form which shows use of various dialog boxes, give respective message.

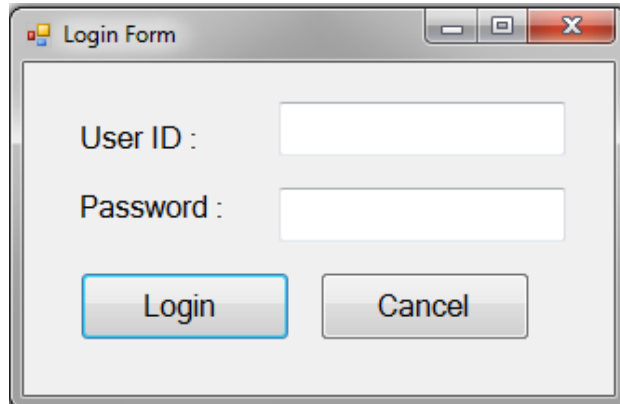

25) Design the Following Notepad using Menu editor & MDI form.

- Edit – Cut, Copy, Paste
- Format – Font, Bold, Italic, Underline, Color(submenu contains 2 options :Back Color, Text Color)
- Find & Replace facility.

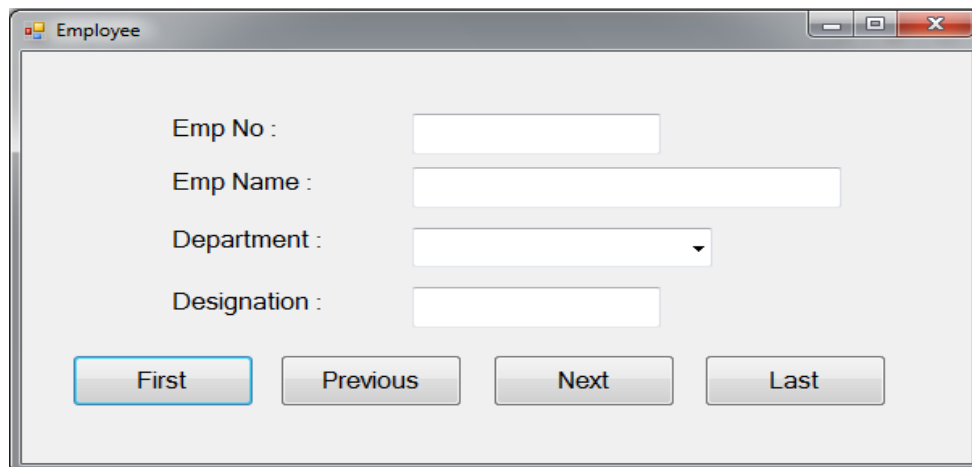

26) Design the Login Form as shown below.

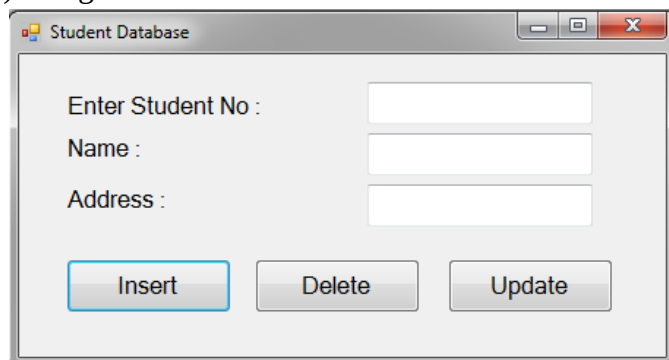

- Using Database connectivity.
- Show welcome message if user is valid user and load main form of the same project.
- For invalid values ask again only for three times after that close application automatically.

27) Create an Employee table with the fields mentioned on the form in SQL. Add few record in this table using SQL. Design following form in vb.net and perform navigations.

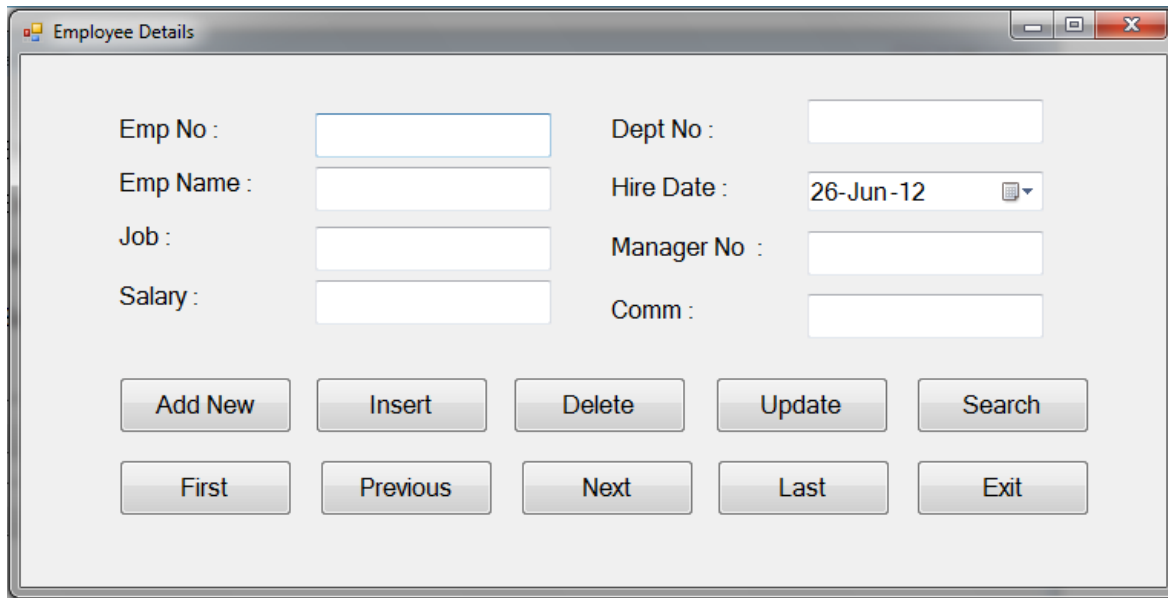

28) Design the Form as shown below

- Create the form that shows the basic operations on Student database (in SQL) like insert, delete and update
- The navigation operation on database .

29) Design the form as shown below

Create table in SQL with following fields. Perform all functions indicated on buttons.

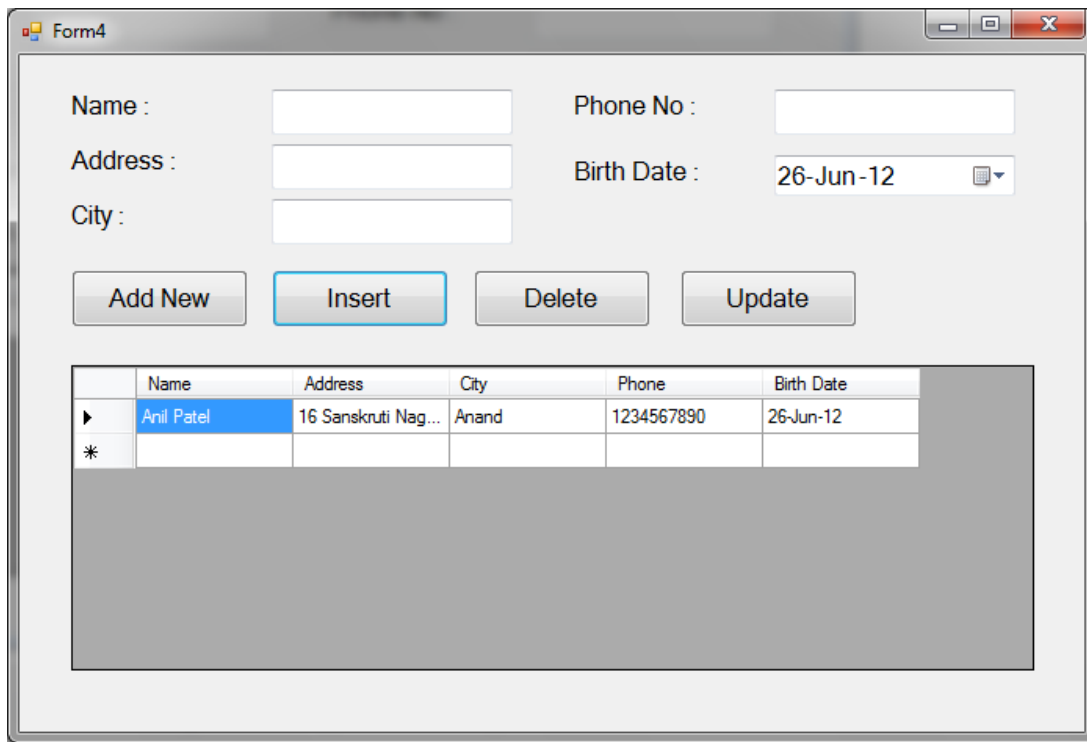

The form titled "Employee Details" contains the following fields and controls:

- Emp No :
- Dept No :
- Emp Name :
- Hire Date :
- Job :
- Manager No :
- Salary :
- Comm :

Buttons: Add New, Insert, Delete, Update, Search, First, Previous, Next, Last, Exit.

30) Design the form as shown below:

Create table in SQL with following fields. Perform all functions indicated on buttons and populate data in DataGridView.

The form titled "Form4" contains the following fields and controls:

- Name :
- Phone No :
- Address :
- Birth Date :
- City :

Buttons: Add New, Insert, Delete, Update.

DataGridView:

	Name	Address	City	Phone	Birth Date
▶	Anil Patel	16 Sanskruti Nag...	Anand	1234567890	26-Jun-12
*					

31) Design the form as shown below. Using Two Tables: Students(stud_no,Stud_name, addr,gender) marks(stud_no,sub1,sub2,sub3). Perform all functions indicated on buttons.

The image shows a window titled "Student Information" with a standard Windows-style title bar (minimize, maximize, close buttons). The form inside has the following elements:

- Stud No :** A text input field.
- Stud Name :** A text input field.
- Address :** A text input field.
- Gender :** A group box containing two radio buttons: "Male" (selected) and "Female".
- Sub 1 :** A text input field.
- Sub 2 :** A text input field.
- Sub 3 :** A text input field.
- Buttons:** Two rows of buttons at the bottom:
 - Row 1: "Add New", "Insert", "Update", "Delete", "Search".
 - Row 2: "First", "Previous", "Next", "Last", "Exit".
