| 1  | What is CLS?                                 |  |
| 2  | Explain CLR.                                 |  |
| 3  | Write a short note on MSIL.                  |  |
| 4  | Write a short Note on JIT Compiler           |  |
| 5  | List the types of project.                   |  |
| 6  | List the parts of IDE.                       |  |
| 7  | List the Data type supported by VB.NET.      |  |
| 8  | List any five operators supported by VB.NET. |  |
| 9  | Define Boxing and Unboxing.                  |  |
| 10 | Write a short note on array.                 |  |
| 11 | What is a variable?                          |  |
| 12 | What is a Constant?                          |  |

**Long Questions:--**

|    |                                                                     | <b>Marks</b> |
|----|---------------------------------------------------------------------|--------------|
| 1  | Explain .NET Architecture.                                          | <b>[10]</b>  |
| 2  | Write a note on Class Library.                                      |              |
| 3  | Write a short note on Tool box.                                     |              |
| 4  | Write a short note on Solution Explorer.                            |              |
| 5  | Write a short note on IDE.                                          | <b>[10]</b>  |
| 6  | Write a note on CLS.                                                |              |
| 7  | Write a note on CTS.                                                |              |
| 8  | Write a note on MSIL.                                               |              |
| 9  | State the Datatype of VB.Net and Explain.                           |              |
| 10 | Write a note on any five string functions.                          | <b>[10]</b>  |
| 11 | What is variable? Explain how variables are declared in VB.NET.     |              |
| 12 | What is an Array? Explain array declaration in VB.NET with example. |              |

|   | <b>Unit - 2</b>                                                                                                            |  |
|---|----------------------------------------------------------------------------------------------------------------------------|--|
|   | <b>MCQ</b>                                                                                                                 |  |
| 1 | In VB .NET, msgbox returns _____ type of data.<br>a) Double<br>b) <b><u>Integer</u></b><br>c) String<br>d) none of these   |  |
| 2 | In VB .NET, inputbox returns _____ type of data.<br>a) Double<br>b) Integer<br>c) <b><u>String</u></b><br>d) none of these |  |
| 3 | In For loop, the default value of step is _____                                                                            |  |

|    |                                                                                                                                                                                                                                                    |  |
|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
|    | a) 2<br>b) <b><u>1</u></b><br>c) 3<br>d) None of these                                                                                                                                                                                             |  |
| 4  | SDI stands for _____<br>a) Standard Document Interface<br>b) Standard Document Integrated<br>c) <b><u>Single Document Interface</u></b><br>d) None of these                                                                                        |  |
| 5  | MDI stands for _____<br>a) <b><u>Multiple Document Interface</u></b><br>b) Multiple Document Integrated<br>c) Multi Device Interface<br>d) None of these                                                                                           |  |
| 6  | In VB.Net _____ is used to set multiple properties for any objects.<br>a) For<br>b) <b><u>With</u></b><br>c) Until<br>d) None of these                                                                                                             |  |
| 7  | To come out from any loop _____ statement is used.<br>a) Break<br>b) Goto<br>c) <b><u>Exit</u></b><br>d) None of these                                                                                                                             |  |
| 8  | In VB .NET to transfer control immediately to the next iteration of a loop _____ statement is used.<br>a) <b><u>Continue</u></b><br>b) Goto<br>c) Exit<br>d) None of these                                                                         |  |
| 9  | _____ loop execute at least once.<br>a) while loop<br>b) if<br>c) <b><u>do...while</u></b><br>d) for                                                                                                                                               |  |
| 10 | When a condition in an If...Then statements tests true:<br>a.) the next Else statement is activated.<br>b.) the next If statement is activated.<br>c.) <b><u>the next Then statement is activated.</u></b><br>d.) a condition can never test true. |  |
| 11 | Which statements are optional in an If...Then statement?<br>a) If<br>b) <b><u>Else</u></b><br>c) Then<br>d) All of the above                                                                                                                       |  |
| 12 | How many times is the test expression of a Select Case evaluated?<br>a) 0<br>b) Once for each Case.<br>c) <b><u>1</u></b><br>d) It depends on the value of the test expression.                                                                    |  |
| 13 | To create procedure _____ keyword is used.<br>a) <b><u>Sub</u></b><br>b) Function<br>c) Procedure<br>d) None of these                                                                                                                              |  |
| 14 | By default the arguments are passes to procedure as _____<br>a) ByRef<br>b) ByDefault<br>c) <b><u>ByVal</u></b><br>d) None of these                                                                                                                |  |
| 15 | In procedure when arguments are passed _____ then procedure can't replace or reassign the underlying variables in calling code.<br>a) ByRef<br>b) ByDefault<br>c) <b><u>ByVal</u></b><br>d) None of these                                          |  |
| 16 | In procedure when arguments are passed _____ then procedure can modify the underlying variables in calling code.<br>a) <b><u>ByRef</u></b><br>b) ByDefault<br>c) ByVal<br>d) None of these                                                         |  |
| 17 | User can also use _____ statement to call procedure.<br>a) Recall<br>b) <b><u>Call</u></b><br>c) Procedure<br>d) None of these                                                                                                                     |  |

|    |                                                                                                                                                                                                                                                                                               |  |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 18 | _____ is used for single condition checking<br><b>1) If..Else..End if</b> 2) IF...Elseif...Else...End if<br>3) Select Case                                        4) Do..While                                                                                                                |  |
| 19 | _____ will repeat the loop untill condition is FALSE.<br>1) Next                                              2) Until<br><b>3) While</b> 4) Case                                                                                                                                             |  |
| 20 | _____ repeat until condition is TRUE.<br>1) Next <b>2) Until</b><br>3) While                                              4) Case                                                                                                                                                             |  |
| 21 | _____ is basic placeholder for all the objects of your application / program.<br>1) File                                              2) Project<br>3) Button <b>4) Form</b>                                                                                                                  |  |
| 22 | The property that can be changed at design time but can't change at runtime is known as _____<br><b>1) Read-only Property</b> 2) Roming Property<br>3) Unchange Property                                  4) Change Property                                                                  |  |
| 23 | _____ is used when all condition becomes false in select...Case statement<br>1) End Select <b>2) Case Else</b><br>3) Else Case                                      4) Select End                                                                                                             |  |
| 24 | _____ is at the highest position in namespaces hierarchy<br><b>1) System</b> 2) System.Drawing<br>3) System.Collection                                  4) System.Data                                                                                                                        |  |
| 25 | _____ is the location where we can put our common code for the application<br>1) Form                                              2) Button<br><b>3) Module</b> 4) Model                                                                                                                     |  |
| 26 | _____ is used to display some kind of data to user during execution of program/appli.<br>1) InputBox <b>2) MessageBox.Show</b><br>3) DataBox.Show                                      4) Multibox.Show                                                                                       |  |
| 27 | _____ is default event for form.<br>1) Click                                              2) DbClick<br><b>3) Load</b> 4) Move                                                                                                                                                                |  |
| 28 | _____ property will resize the control as per the contents reference within<br>1) Resize <b>2) Autosize</b><br>3) Width                                              4) Height                                                                                                                |  |
|    |                                                                                                                                                                                                                                                                                               |  |
|    | <b>Short Questions (Each of 2 marks)</b>                                                                                                                                                                                                                                                      |  |
| 1  | Write down the syntax of following structure:<br>1) If...End If                                  2) Select ... End Select                                  3) Do...Loop<br>4) For...Next                                  5) While...Wend                                  6) With...End With |  |
| 2  | Differentiate between: MessageBox – Inputbox                                                                                                                                                                                                                                                  |  |
| 3  | Write a difference between Procedure and Function.                                                                                                                                                                                                                                            |  |
| 4  | Write a difference between MDI and SDI.                                                                                                                                                                                                                                                       |  |
| 5  | What is procedure? How it is created in VB .NET?                                                                                                                                                                                                                                              |  |
| 6  | How functions are declared in VB .NET?                                                                                                                                                                                                                                                        |  |
| 7  | What is the use of 'By Val' & 'By Ref' keyword?                                                                                                                                                                                                                                               |  |
| 8  | List any five properties supported by Windows Form and explain any one of them.                                                                                                                                                                                                               |  |
| 9  | Explain Show method of Windows Form.                                                                                                                                                                                                                                                          |  |
| 10 | List any five events supported by Windows Form and explain any one of them.                                                                                                                                                                                                                   |  |
