

Institute of Science and Technology for Advanced Studies and Research

Master of Computer Application(MCA)

Semester-1

Master of Science(Information Technology)

Subject Title: Practical based on Web Programming Concepts-Beginner to Professional

Subject Code: 101300123

JavaScript

1.	Write a program to print "Welcome to JavaScript" using console.log().
2.	Write a JavaScript program to display student details (Name, Age, and Course) on a web page using document.write().
3.	Write a JavaScript code to display the message "Hello ISTAR!". (Alert Dialog Box)
4.	Ask the user for their name using prompt() and display it back with alert().
5.	Use let and const to declare variables, and try re-assigning them (observe difference).
6.	Write a program to find typeof all variable of JavaScript .
7.	Write a program to add, subtract, division, and multiplication of given numbers.
8.	Write a program to convert Fahrenheit to Celsius.
9.	Write a program to convert Celsius to Fahrenheit.
10.	WRITE a program to find answer of $ax^2 + b*x + c$.
11.	Write a program to find large number among two numbers.
12.	Write a program to find large number among given three numbers.
13.	Write a program to check whether the number is positive, negative or zero.
14.	Write a JavaScript code to display the message as "Are you sure you want to proceed?" and display the message as "Completed successfully." If press OK button, then display the message as "You have cancelled it." If press Confirm button. (Confirm dialog box)
15.	Get one number as "age" from user and check whether he/she is eligible for voting or not. (Prompt dialog box).
16.	Write a function greet() that prints "Hello, Welcome to JavaScript!".
17.	Write a function square(num) that returns the square of a number.
18.	Write a function isEven(num) that checks whether a number is even or odd.
19.	Write a function add(a, b) that takes two numbers and returns their sum.
20.	Write a function findMax(a, b) that returns the larger of two numbers.
21.	Write a function sumArray(arr) that returns the sum of all elements in an array.
22.	Write a function findLargest(arr) that finds the largest element in an array.
23.	Write a function countEvenNumbers(arr) that counts how many even numbers are in an array.
24.	Write a function filterOddNumbers(arr) that returns only odd numbers from an array.
25.	Write a function average(arr) that finds the average of an array of numbers.
26.	Get a number from user and find factorial of it.(Prompt dialog box)
27.	Take a <code><p id= 'demo'>ISTAR</p></code> and write a JavaScript to change the content as "Computer science department" in this <code><p></code> tag when button clicked.
28.	Take a two tags <code><p id= 'college'>ISTAR</p></code> and <code><p id= "dept">computer science department</p></code> . Write a JavaScript code to swap these two contents each time when button clicked.
29.	Write JavaScript codes that change the image source when button clicked.
30.	Take three input boxes as x, y and answer. Take four buttons for +, -, * and /. Take
